

SANJANA JAISWAL

GENAI & FULL-STACK ENGINEER

Lucknow, Uttar Pradesh sanjanajaiswalbst@gmail.com

ABOUT ME

AI Engineer experienced in building and deploying full-stack AI applications — from machine learning models and multi-agent systems to chatbots and recommendation engines — using Python, ReactJS, and cloud infrastructure (AWS EC2, SageMaker, Docker). Skilled in bridging model development with production engineering and committed to continuous learning in emerging AI and agentic architectures.

EXPERIENCE

Software Analyst — GenAI & Full-Stack Engineering *smartData Enterprises | Since Oct 2025*

- Designed and implemented AI/ML features including chatbots, semantic search, and data processing pipelines using Python, AI/ML, and the MERN stack.
- Conducted data collection, preprocessing, feature engineering, and model evaluation; performed web scraping and data extraction for AI model consumption.
- Implemented authentication, authorization, exception handling, and logging; used Jira for sprint planning and collaboration.

EDUCATION

Bachelor of Computer Applications *University of Lucknow | 2022 – 2025*

Ranked 1st in BCA program with a consistent academic record; received multiple certifications and awards in Web Development, Python, and Machine Learning.

Intermediate – PCB *SVM Rambagh-Basti | 2021 – 2022*

Achieved top rank in Class 12 with excellence in Computer Science.

High School – PCB *SVM Rambagh-Basti | 2019 – 2020*

Consistently ranked among the top 5% of the class.

TRAININGS

Training Program – Full Stack Development with AI & ML *Karvatech Solutions | 2025*

6-month training program in Full Stack Web Development with AI/ML, building responsive web applications integrated with ML models.

Industrial Training – Python with Django *Softpro India Pvt. Ltd | 2024*

90-day industrial training in Web Development using Python and Django — database integration and dynamic front-end features with Django, Python, HTML, CSS, and JavaScript.

SKILLS

Programming Languages: Python, JavaScript/TypeScript

AI/ML & Generative AI: Machine Learning, Deep Learning, Natural Language Processing (NLP), Generative AI, LLM-based Applications, Multi-Agent Systems, Agentic AI, Prompt Engineering, Model Fine-Tuning, Recommendation Systems, Predictive Modeling

Backend & APIs: Django, FastAPI, Node.js, REST APIs, Web Scraping, Authentication & Authorization

Frontend: ReactJS, TypeScript, HTML, CSS, JavaScript, Responsive Design

AI Systems & Orchestration: Multi-Agent Orchestration, Task Dependency Management, Workflow Automation, DAG-based Execution

Databases & Tools: MongoDB, MySQL, Git, Jira

Cloud & Deployment: AWS (EC2, SageMaker, Secrets Manager), Docker, Cloudflared, AWS Amplify, Vercel, Jenkins (CI/CD)

PROJECTS

Syndra — Multi-Agent AI Automation & Orchestration Platform *Personal Project | Ongoing*

A multi-agent orchestration platform exploring how AI agents plan, execute, and coordinate work beyond simple chat interactions — breaking a high-level goal into tasks, assigning them to specialized agents, and coordinating execution through a structured workflow.

- Implemented multi-agent orchestration with task dependency management, parallel execution, and DAG-based execution visibility with agent telemetry and traceability.
- Developed automated report generation with source tracking.

INAC — AI-Powered Law Chatbot *smartData Enterprises*

Full-stack AI/ML project; completed frontend development (UI components, responsive design, interactive pages). Tech: React (Vite), Node, Python.

- Implemented Python-based web scraping, data cleaning, and preprocessing to prepare chatbot datasets; assisted in testing and fine-tuning for accuracy and context-aware responses.
- Contributed to the agentic layer, integrating autonomous decision-making features to enhance chatbot performance.

Farmer-Merchant Integration (Cold Storage Automation) *Personal Project*

Built a Farmer-Merchant Integration Platform (Python, Django) enabling service booking, order tracking, and stock management, with responsive UI and real-time notifications.

Full-Stack User Management System *Personal Project*

Developed a full-stack User Management System using ReactJS with TypeScript, enabling secure user registration, login, and role-based access control. Includes PDF export functionality using React-PDF Renderer and email notifications through Nodemailer.

AI-Based Music Recommendation Engine (with Streamlit UI) *Personal Project*

Built a music recommendation system using collaborative filtering and cosine similarity on user-item interaction data, with an interactive Streamlit UI for real-time, personalized music discovery.

EXTRA-CURRICULAR ACTIVITIES

- Volunteered with the National Service Scheme (NSS) for two years, organizing and participating in various community service projects.
- Volunteered with an NGO, contributing to community development initiatives and organizing educational support programs for underprivileged students.
